

Hose Recovery Vehicle - HRV

Description

Establishing a pipeline to combat a roaring fire will sometimes require thousands of feet of hose to route the water to firefighting equipment like our monitor trailers and foam tote trailers using mobile pump units. This long water transport is key to the successful suppression of the hazards faced. This hose must be recovered after an incident is deemed safe.

Our HRV makes this process easier and faster for the retrieval crew after a long tiring fight. The fully automated hose recovery vehicle requires minimal training and is designed to be intuitive and simple.

Built by firefighters, for firefighters, our US Fire Pump crew has used its years of experience to build custom, dependable equipment to ensure the maximum efficiency of an emergency response unit.

Features

- Capable of picking up 6" to 12" hose
- Many commercial chassis to choose from
- Stainless steel retrieval unit
- Hose box available from 16' to 24'
- Hose box can use hook lift or cable lift system
- On board tool and hose adapter storage
- Hose Box and Retrieval Module available separately

Note: Contact US Fire Pump Sales Department for additional custom configurations.
